The Clinical Challenge:
Staff and patient safety is a top concern for every healthcare facility. Minimizing health risks faced by workers and patients due to exposure to bloodborne pathogens is also part of complying with stringent OSHA directives.

The Clinical Solution:
The ACCU-CHEK Safe-T-Pro lancet is designed with special internal safety tabs to prevent reuse, and meets OSHA requirements mandating “safety-engineered” needle devices to reduce such risks.¹

This easy-to-use, single-use lancet adds protection by permanently retracting into its protective case after use, preventing accidental fingersticks. And the ACCU-CHEK Safe-T-Pro lancet delivers the blood sample you need to perform the test your patient requires.

From the moment you choose to use it until the moment it's discarded, the ACCU-CHEK Safe-T-Pro lancet meets safety standards expected from you, your patients, and staff—and OSHA as well.

Safety-engineered
• Retractable needle meets OSHA requirements which helps reduce accidental fingersticks and enhance infection control

Economic value
• Helps reduce liability risks and other costs linked to incidents of cross-contamination
• Simple two-step function means minimal training required
**ACCU-CHEK Safe-T-Pro lancets:**
*Delivering safety and compliance with every blood sample*

**Simple two-step process:**

1. **Twist** off cap.
   - Remove blue sterility cap with a *simple twist*.

2. **Press** blue button.
   - Cleanse the puncture site according to your facility’s protocols, then *gently hold lancet* against side of fingertip (middle or ring finger is recommended) and press blue button to activate. Excess pressure on the finger should be avoided. Properly discard the lancet and cap after use.

**Safety mechanisms:**

- **Before use:**
  - The ACCU-CHEK Safe-T-Pro lancet’s safety tabs are positioned in a T-shape, designed to break after a single use.

- **During use:**
  - After the blue button is depressed, the spring-loaded firing action breaks the safety tabs to prevent reuse.

- **After use:**
  - The lancet permanently retracts into its protective case after use to help prevent accidental fingersticks and cross-contamination during disposal.
